iofast.com is pleased to announce international shipping for a limited trial period from February 15, 2007 to March 31, 2007. After March 31, 2007 iofast.com will evaluate this program and determine whether to continue this program in the future. iofast.com reserves the right to end this program at any time. During this trial period customers located outside of the U.S. interested in purchasing from iofast.com may send an email detailing each order. If this trial program is successful iofast.com may add international shipping options directly to the website, thus eliminating the need to email orders and receive shipping quotes via email.

The fee structure for international shipments follows:

Sub-Total (of all items) + The larger of 20% of Sub-Total or \$25 + International shipping charge. iofast.com offers a variety of international shipping options including USPS, FedEx & UPS. DHL shipping services may also be available upon request. Example, a customer orders \$350 of cat5e cables with an international shipping charge of \$45. The final price is \$465 using the following calculation: $\$350 + \$70 (\$350 * 0.2) + \45 . Any order below \$125 sub-total will have a fixed \$25 fee instead of the 20% value used in the above calculation.

All international orders require you to submit an email to sales@iofast.com detailing the part numbers and options you want along with your full address. You should expect to receive a quote from us in 1-2 business days. iofast.com will arrange payment and ship your order once payment has cleared.

As some items may not be in stock at our primary warehouse, processing your order may take 1-6 additional business days as compared to a domestic order. Domestic orders often involve split-shipments whereas International orders prohibit split-shipments due to shipping costs. Any request to expedite this process may require additional rush processing fees.
